Description:

This course aims to introduce students to the foundational theoretical debates linked to alternative economies as well as to initiatives of social and solidarity economies. It will cover a wide range of theoretical lenses and provide an overview of key concepts around diverse economies. Part I will examine some key concepts such as market society, post-development and post-capitalist alternatives and will explore the roots of these discussions. Part II will discuss themes related to ecological economics, degrowth, circular economy, and doughnut economics, which aims to uncover the relations of economy, ecology and society. Part III will focus on the literature on community economies, community-based economies and diverse economies. Part IV will explore the economies of commons as well as social and solidarity economies both in theory and practice. In this part, a range of initiatives such as housing and energy cooperatives, alternative/local currencies, time banks, and digital commons will be discussed. Finally, Part V will emphasize gender economy, care economy, and feminist economics.

Course objectives:

The course has the objective of providing students with a critical lens to understand and analyze discussions on how the economy is designed and understood, as well as how it is related to society, environment and power relations. On completion of this course, the students will have a wide understanding of diverse economies and why there is a need for a paradigm shift. They will develop a critical perspective on the roots of economic and political problems and link them to current social and political debates.

Evaluation:

Students are expected to fulfill the following requirements of the course:

- 1) Regular attendance and participation in class discussions are expected. Additionally, each student will choose one week's readings and present them to the class (35%).
- 2) 3 response papers (approx. 2 pages) discussing the readings of three weeks –decided by the student- will be sent to the instructor one day before the corresponding class (15%).
- 3) A final research paper will be written in a scientific paper format with appropriate referencing (40%). Students will choose a scientific journal linked to their research theme and follow its submission procedure for their paper. At the end of the semester, they are encouraged to submit their paper to the journal they have chosen.
- 4) A well-structured outline or a draft of the final paper is required by the beginning of April (10%).
